

The Smithsonian Affiliated Kansas
Cosmosphere and Space Center Presents

Living in Space

Ever wondered what it is like to go into space? How do you eat in space? Sleep? Go to the bathroom? How dangerous is it, really?

The secrets of space travel are revealed in this fast paced, entertaining show. The show looks at a day in the life of an astronaut. The props and materials in this program are the “real deal!”

“This is a program I have tried to contract for my schools for the past 15 years. I am thrilled to now be able to offer this exceptional and one-of-a-kind science and space program.”
– John Tacha, Director

“Some of the most exciting space education going on in this country is not coming out of Washington or New York or California, or even Texas. It’s coming from a place in Kansas called the Cosmosphere.”

– Gene Cernan, Apollo XVII commander and last man to walk on the moon

“Kids and parents just loved the Living in Space program. Tom really knows how to entertain. The kids really learned a lot and were talking about it way into the evening program.”

– Winfield Public Library, Winfield, KS
